Data & Analytics Skills

- Data Cleaning & Preprocessing
- Exploratory Data Analysis (EDA)
- Data Interpretation & Reporting
- Predictive Analysis
- Data Visualization & Dashboarding
- Microsoft Excel (Intermediate)

Core Skills

- Problem Solving
- Analytical Thinking
- Attention to Detail
- Logical Thinking
- System Design Basics

Education

BSc (Hons) in Data Science (Top-Up) - London Metropolitan University (UK) **2025 - Present**

Currently pursuing a degree with a strong focus on data analysis, artificial intelligence, and practical learning. Actively developing skills in data handling, problem-solving, and applying theoretical knowledge to real-world projects.

HND in Computing (Software Engineering) **2023 – 2024**

Gained foundational knowledge in programming, software development, and IT concepts, supported by hands-on project experience.

Projects

Yelp Business Data Analysis & Prediction System [\(Dashboard\)](#)

Analyzed large-scale Yelp data to understand customer behavior and predict business success using big data tools and machine learning.

- Processed and cleaned 17,000+ business records using PySpark
- Analyzed customer engagement (reviews, tips, check-ins) to identify key success factors
- Built a Random Forest model to predict high-performing businesses (4.0+ ratings)
- Found strong correlation between customer engagement and business popularity
- Created interactive Tableau dashboards to visualize trends, demand hotspots, and market gaps
- Simulated real-time data streaming to demonstrate live customer feedback monitoring

TicketHub - Event Management & Ticketing System

[**\(GitHub\)**](#)

Built a web-based system to manage events, ticket bookings, and user interactions.

- Developed features for event creation, ticket booking, and user management
- Implemented role-based access (Admin, Organizer, Member, Guest)
- Designed a structured database with proper relationships and normalization
- Ensured accurate ticket availability and prevented overbooking
- Added review, rating, and inquiry features for better user engagement

AI-Powered Wealth Planner System - (Final Year Project)

[**\(GitHub\)**](#)

Developing an intelligent system to help users manage, predict, and improve their personal finances using AI.

- Designed a system to track income, expenses, and savings in one platform
 - Built predictive models to forecast future expenses and savings
 - Developed personalized financial recommendations based on user behavior
 - Integrated risk detection to identify overspending and poor financial habits
 - Planned an AI chatbot to provide real-time financial advice using natural language
 - Focused on improving financial literacy and decision-making
-
